

A range of beam angles and profiles are possible, and colour gels can be incorporated to provide fixed subtle colour tints.

On stand 66, **Deltalight** will show off a range of interior and exterior fittings from its Lighting Bible 08 catalogue. Interior fittings include *Stripe*, a minimalist aluminium LED fitting for general table lighting and mood lighting. *Stripe* fits perfectly in a contemporary interior. *Topix*, **04**, is suitable for multiple applications and can be used alone for accent lighting or in combination. Light colour can be warm white, cold white or blue, and the fitting itself is available in white or aluminium grey.

*Labyrinth* is an exterior fitting that looks like a museum piece by day, but provides a unique play of light in the evening. It has four aluminium rods that are put in a sail

arm position, creating a captivating play of light lines on the ground.

**LEE Filters** will exhibit its lighting filter products on stand 36. There are more than 250 coloured sleeves for fluorescent tubes, **05**, and a range of glass dichroic filters, **06**. Nine colours have been added to the dichroic range in response to feedback from designers.

LEE will also show its glass diffusion filters. There are 12 coloured glass dichroic filters with built-in diffusion and four glass diffusion filters that offer different densities of diffusion for a range of lighting effects. LEE also has screw-on and clip-on filter holders suitable for MR16, PAR16 and MR11 fittings.

**Mike Stoane Lighting** (stand 109A) has been working with Xicato to create its Type X fittings. The Xicato Module >>
